Computer Vision

Make up Class 5 Assignment

1	Define intrinsic camera parameters and list their major components.
2	State the role of extrinsic parameters in describing the relationship between the camera and world coordinate systems.
3	Explain radial lens distortion and mention its common effects on captured images.
4	Differentiate between orthographic, weak perspective, affine, and perspective camera models.
5	Analyze the relationship between intrinsic and extrinsic camera parameters in obtaining a complete camera projection model from a projection matrix.
